TIME 1 hour 15 minutes

INSTRUCTIONS TO CANDIDATES

- Write your name in the space above.
- Write your Centre number and Candidate number in the boxes above.
- Answer **all** the questions.
- Write your answers in the spaces on the question paper.
- Read each question carefully and make sure you know what you have to do before starting your answer.

INFORMATION FOR CANDIDATES

- The number of marks is given in brackets [] at the end of each question or part question.
- You will be awarded marks for the quality of written communication where this is indicated in the question.
- You may use a scientific calculator.
- You may use the *Data Sheet for Chemistry*.
- You are advised to show all the steps in any calculations.

| FOR EXAMINER'S USE | | |
|---------------------------|-------------|-------------|
| Qu. | Max. | Mark |
| 1 | 17 | |
| 2 | 12 | |
| 3 | 18 | |
| 4 | 13 | |
| TOTAL | 60 | |

This question paper consists of 9 printed pages and 3 lined pages.

Answer **all** questions.

- 1 An equilibrium system exists between $\text{SO}_2(\text{g})$, $\text{O}_2(\text{g})$ and $\text{SO}_3(\text{g})$.

The equilibrium constant K_p for this reaction is $4.0 \times 10^{19} \text{ Pa}^{-1}$ at 25°C .

- (a) Le Chatelier's principle can be used to predict how the position of equilibrium may change in a system that is in dynamic equilibrium.

- (i) State *le Chatelier's principle*.

.....
.....[2]

- (ii) Write the expression for the equilibrium constant, K_p , for this equilibrium.

[1]

- (iii) What does this value of K_p suggest about the position of equilibrium at 25°C and the relative equilibrium proportions of the reactants and products?

.....
.....
.....[2]

- (b) Using *le Chatelier's principle*, predict how the position of this equilibrium may be affected by the following changes. Explain your answers.

- (i) The temperature is increased while keeping the pressure constant.

effect on equilibrium position

.....
.....[1]

effect on partial pressure of $\text{SO}_3(\text{g})$

.....
.....[1]

(ii) The pressure is increased while keeping the temperature constant.

effect on equilibrium position

.....
.....[1]

effect on mole fraction of SO₃(g)

.....
.....[1]

(c) What is the effect on K_p of

(i) increasing the temperature;

.....[1]

(ii) increasing the pressure?

.....[1]

(d) The industrial production of SO₃(g) from SO₂(g) and O₂(g) is carried out between 400 °C and 450 °C, in the presence of a catalyst and using a pressure that is just greater than normal atmospheric pressure.

Suggest why each of these conditions is used.

[Total : 17]

- 2 Benzenediazonium chloride, $C_6H_5N_2Cl$, decomposes above $10^\circ C$, releasing nitrogen gas.

The graph below shows how the concentration of $C_6H_5N_2Cl$ changes with time at $50^\circ C$.

- (a) This reaction is first order with respect to $C_6H_5N_2Cl$. This can be confirmed from the graph using half-lives.

(i) What is meant by the *half-life* of a reaction, $t_{1/2}$?

.....
[1]

(ii) Use this graph to show that this reaction is first order with respect to $C_6H_5N_2Cl$. You should mark on the graph any working.

.....

[3]

(iii) What would be the effect on the half-life of this reaction of doubling the initial concentration of $C_6H_5N_2Cl$?

.....[1]

- (b) For a first order reaction, the rate constant, k , can be found using the following relationship.

$$kt_{\frac{1}{2}} = 0.693$$

Calculate the value for the rate constant, k , of this reaction. Include the units of k in your answer.

[2]

- (c) Write down the expression for the rate equation of this reaction.

.....[1]

- (d) The rate of this reaction can be calculated by using the graph and the rate equation together.

- (i) Read from the graph the concentration of $C_6H_5N_2Cl$ after 800 s.

.....[1]

- (ii) Use the rate equation to calculate the rate of this reaction after 800 s. Include units in your answer.

[2]

- (iii) How could you measure the reaction rate after 800 s directly from the graph alone?

.....
.....[1]

[Total : 12]

- 3 Methanoic acid, HCOOH , is an ant's main defence mechanism, squirted at potential intruders and injected in 'ant bites'. The common name for methanoic acid is *formic acid*, named from the Latin *formica* which means 'ant'.

A chemist collected the formic acid squirted by 20 ants and added sufficient water to make 25.0 cm^3 of a solution **X**.

The chemist titrated solution **X** with sodium hydroxide, NaOH(aq) .

- 20.0 cm^3 of NaOH were required to neutralise the formic acid.
- The equation for the neutralisation of formic acid is shown below.

- (a) Write the ionic equation for this reaction.

.....[1]

- (b) Sodium hydroxide is a strong alkali. The concentration of NaOH(aq) used in the titration was $0.00750 \text{ mol dm}^{-3}$.

Calculate the pH of this solution. [$K_w = 1.00 \times 10^{-14} \text{ mol}^2 \text{ dm}^{-6}$]

[3]

- (c) Calculate the amount, in mol, of HCOOH that was neutralised in the titration.

[2]

- (d) An average ant contains $6.0 \times 10^{-4} \text{ g}$ of formic acid. Calculate the percentage of a typical ant's supply of formic acid collected by the chemist for the titration.

[3]

- (e) Formic acid is a weak acid with an acid dissociation constant, K_a , of $1.6 \times 10^{-4} \text{ mol dm}^{-3}$.

- (i) What is meant by a *weak acid*?

.....
[1]

- (ii) Write an expression for the acid dissociation constant, K_a , of formic acid.

[1]

- (iii) The concentration of formic acid in solution **X** was $6.0 \times 10^{-3} \text{ mol dm}^{-3}$.
 Calculate the pH of solution **X**.

[3]

- (f) The recommended treatment for an ant bite is the application of 'bicarbonate of soda', which contains NaHCO_3 . Suggest, with the aid of an equation, how NaHCO_3 helps to relieve the effect of an ant bite.

.....

[2]

- (g) Wasp stings are treated with vinegar. What does this suggest about the nature of the active ingredient in a wasp sting? Explain your answer.

.....

[2]

[Total : 18]

- 4 In this question, you should use knowledge, principles and concepts from different areas of chemistry. *(In this question, 1 mark is available for the quality of written communication.)*

Compound **A** was analysed in the laboratory and was shown to have the composition by mass K, 31.9%; Cl, 29.0%; O, 39.1%.

On gentle heating, compound **A** formed potassium chlorate(VII), KClO_4 , and compound **B** in a 3:1 molar ratio.

On strong heating, 0.250 g KClO_4 was broken down into compound **B** and oxygen gas.

An aqueous solution of compound **B** formed a white precipitate, **C**, with aqueous silver nitrate.

Showing **all** your reasoning,

- identify substances **A – C**, [6]
- write balanced equations for all reactions that took place, [3]
- calculate the mass of **B** formed from 0.250 g of KClO_4 , [2]
- calculate the volume of oxygen formed, at room temperature and pressure. [2]

[Total : 13]

A series of horizontal dotted lines for writing, spanning the width of the page.

Session: January
Year: 2002

Mark Scheme

12/02/2001

| | |
|---------------------|-----------|
| MAXIMUM MARK | 60 |
|---------------------|-----------|

-
1. (a) (i) An equilibrium system under change will shift the equilibrium position ✓
in the direction that minimises the effect of the change ✓ [2]
- (ii)
$$K_p = \frac{(p \text{SO}_3)^2}{(p \text{SO}_2)^2 \times (p \text{O}_2)}$$
 ✓ [1]
- (iii) equilibrium is well to right ✓
far greater concentration of products than reactants ✓ [2]
- (b) (i) *effect on equilibrium position*
moves to left: forward reaction is exothermic/reverse reaction is endothermic ✓ [1]
- effect on partial pressure of SO₃(g)*
decreases because equilibrium has moved to left ✓ [1]
- (ii) *effect on equilibrium position*
moves to right because less gas moles on right ✓ [1]
- effect on mole fraction of SO₃(g)*
increases because equilibrium has moved to right ✓ [1]
- (c) (i) K_p decreases. ✓ [1]
- (ii) no change ✓ [1]
- (d) increased temperature increases rate ✓
but only sufficiently so that equilibrium is not pushed too far to left ✓ [2]
- catalyst speeds up reaction ✓ by lowering activation energy ✓
allows reaction to proceed at lower temperature ✓
any 2 points → 2 max [2]
- energy costs saved ✓ safer to use smaller pressures ✓
high yield at this pressure/ equil position can be controlled using temp and catalyst ✓
any 2 points → 2 max [2]
- [Total: 17]**

2. (a) (i) What is meant by the *half-life* of a reaction, $t_{1/2}$?

Time for half a reactant to react ✓

[1]

(ii) $t_{1/2} = 460 \pm 10$ s ✓

constant half life ✓

evidence on graph to support constant half life (at least two half-lives shown) ✓

[3]

(iii) no change ✓

[1]

(b) $k = 0.693 / t_{1/2} = 0.693/460 = 1.51 \times 10^{-3}$ ✓ s^{-1} ✓

for consequential marking: answer should be: $0.693/\text{ans to (a)(ii)}$

[2]

(c) Rate = $k[\text{C}_6\text{H}_5\text{N}_2\text{Cl}(\text{aq})]$ ✓

[1]

(d) (i) After 800s, $[\text{C}_6\text{H}_5\text{N}_2\text{Cl}(\text{aq})] = 1.8 \times 10^{-4} \text{ mol dm}^{-3}$ ✓

(allow any value from 1.7×10^{-4} to 1.8×10^{-4})

[1]

(ii) Rate = $k[\text{C}_6\text{H}_5\text{N}_2\text{Cl}(\text{aq})] = (1.51 \times 10^{-3}) \times (1.8 \times 10^{-4})$

= 2.7×10^{-7} ✓ $\text{mol dm}^{-3} \text{ s}^{-1}$ ✓

[2]

(iii) measure gradient at $t = 800$ s ✓

[1]

[Total: 12]

3. (a) $\text{H}^+(\text{aq}) + \text{OH}^-(\text{aq}) \longrightarrow \text{H}_2\text{O}(\text{l})$ ✓ [1]
- (b) $[\text{H}^+(\text{aq})] = K_w / [\text{OH}^-(\text{aq})] = 1.0 \times 10^{-14} / 0.00750 = 1.33 \times 10^{-12} \text{ mol dm}^{-3}$ ✓
 $\text{pH} = -\log[\text{H}^+(\text{aq})] = -\log 1.33 \times 10^{-12} = 11.9$ ✓ [3]
- (c) moles NaOH = $0.00750 \times 20/1000 = 1.50 \times 10^{-4} \text{ mol}$ ✓ [1]
 moles HCOOH = $1.50 \times 10^{-4} \text{ mol}$ ✓ [1]
- (d) mass of formic acid in 20 ants = $1.50 \times 10^{-4} \times 46 = 6.9 \times 10^{-3} \text{ g}$ ✓
 mass of formic acid in 1 ant = $6.9 \times 10^{-3} / 20 \text{ g} = 3.45 \times 10^{-4} \text{ g}$ ✓
 % of formic acid = $(3.45 \times 10^{-4} / 6.0 \times 10^{-4}) \times 100 = 57.5 \%$ ✓ [3]
- (e) (i) partially dissociates ✓ [1]
 (ii) $K_a = \frac{[\text{H}^+(\text{aq})] \times [\text{HCOO}^-(\text{aq})]}{[\text{HCOOH}(\text{aq})]}$ ✓ [1]
 (iii) $K_a = \frac{[\text{H}^+(\text{aq})]^2}{[\text{HCOOH}(\text{aq})]}$ ✓ $\therefore 1.6 \times 10^{-4} = \frac{[\text{H}^+(\text{aq})]^2}{6.0 \times 10^{-3}}$
 $[\text{H}^+(\text{aq})] = \sqrt{\{ (1.6 \times 10^{-4}) \times (6.0 \times 10^{-3}) \}} = 9.8 \times 10^{-4} \text{ mol dm}^{-3}$ ✓
 $\text{pH} = -\log[\text{H}^+(\text{aq})] = -\log 9.8 \times 10^{-4} = 3.0$ ✓ [3]
- (f) baking powder must be an alkali/base OR baking powder neutralises acid in ant bite ✓
 $\text{HCOOH} + \text{NaHCO}_3 \longrightarrow \text{HCOONa} + \text{CO}_2 + \text{H}_2\text{O}$ ✓ [2]
- (g) vinegar is acidic ✓ and neutralises alkali in wasp sting ✓ [2]
- [Total: 18]

4. **A** $K : Cl : O = 31.9/39.1 : 29.0/35.5 : 39,1/16 = 0.82 : 0.82 : 2.44$ ✓
 $= KClO_3$ ✓
- B** Addition of $Ag^+(aq)$ with white ppt is test for Cl^- ✓
 $= KCl$ ✓
- C** $AgCl$ ✓

1.1h, 1.5c [5]

- write balanced equations for all reactions that took place,

1.1i [3]

- calculate the mass of **B** formed from 0.250 g of $KClO_4$.

$$\text{amount of } KClO_4 = 0.250/138.6 = 1.80 \times 10^{-3} \text{ mol}$$
 ✓

$$\text{mass } KCl = 74.6 \times 1.80 \times 10^{-3} \text{ mol} = 0.134 \text{ g}$$
 ✓

(or 0.135 g if moles are not rounded)

✓ ✓ 1.1h [2]

- calculate the volume of oxygen formed, at r.t.p..

$$\text{amount of } O_2 = 2 \times (1.80 \times 10^{-3}) = 3.60 \times 10^{-3} \text{ mol}$$
 ✓

$$\text{volume of } O_2 = 24/1000 \times (3.60 \times 10^{-3}) = 86 \text{ cm}^3$$
 ✓

(or 87 cm³ if moles are not rounded)

1.1h[2]

Clear, well-organised [1]**[Total: 13]**
